

The freedom to choose supplemental resources based on student needs

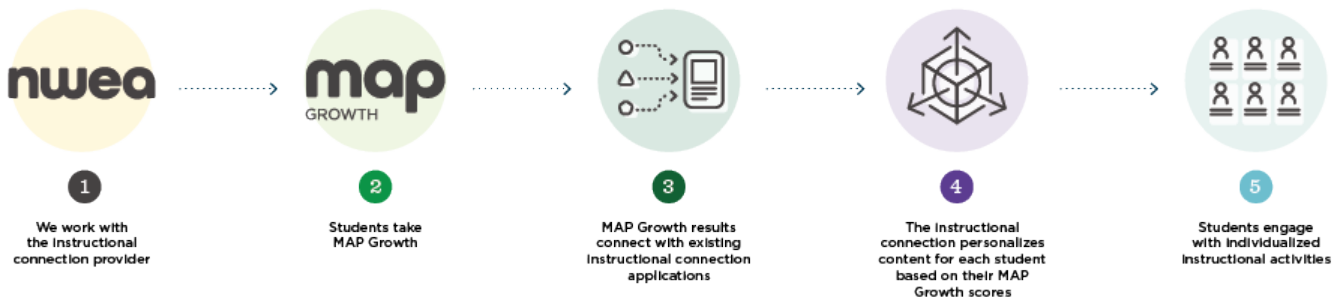

We know there are a lot of different reasons you use supplemental resources in the classroom. That's why we designed MAP® Growth™ data to work with most instructional tools in the industry. With MAP Growth, you have the freedom to choose the supplemental resources that best meet the needs of your students and the ability to get even more value from many of the instructional resources you may already be using.

Sharing MAP Growth data with one of our 30+ instructional connections saves educators time by:

- Reducing time spent assessing students in the supplemental resources
- Providing students with instructional content aligned to individualized learning needs
- Creating personalized learning pathways for 1:1 support and small- and large-group learning
- Generating instructional resources and lesson plans

How it works

Our vetting process

We've worked with educators from around the world to understand which tools they already have in place that could benefit from connecting to MAP Growth data. We have carefully vetted each tool to ensure that our connections provide the value and precision you've come to count on from us. This involves ensuring that the content is:

- Standards-aligned, with appropriate depth and instructional relevance
- Built for diverse student populations
- Considerate of accessibility and accommodation needs
- Built on effective instructional best practices
- Engaging across multiple modes of student learning

Instructional connections

We collaborate with the industry's most extensive array of instructional providers to help schools and districts get more from tools they're already using in grades K-12 in math and reading. Below are just a few of the 30+ providers that are part of our Instructional Connections program.
